

# Boaz Kaufman

New York, NY | [bk1nyc@gmail.com](mailto:bk1nyc@gmail.com) | [github.com/ernulphus](https://github.com/ernulphus) | [linkedin.com/in/boaz-kaufman](https://linkedin.com/in/boaz-kaufman) | [boazkaufman.com](https://boazkaufman.com)

## Technical Consultant and Software Engineer

Technical consultant leveraging experience as a full stack software engineer. Focused on high throughput, stability, and security. Favors test-driven Agile development. Currently enrolled part-time in UC Berkeley's Master of Information and Cybersecurity program.

## EDUCATION

---

### UC Berkeley School of Information

May 2024 — May 2026

*Master of Information and Cybersecurity (MICS)*

*Remote*

- Relevant Coursework: Software Security, Network Security, Cryptography, Privacy Engineering, Applied Machine Learning for Cybersecurity, Risk Management

### CUNY Macaulay Honors College @ Hunter College

Aug 2018 — June 2022

*Bachelor of Arts in Computer Science, Magna Cum Laude*

*New York, NY*

- Relevant Coursework: Data Structures and Algorithms, Operating Systems, Computer Architecture, Computer Theory, Network Security

## WORK EXPERIENCE

---

### Full Stack Web Engineer

Aug 2023 — Present

DataMixMaster, LLC

*Remote*

- Joined as employee #3 in a data science startup founded by an NYU professor of Computer Science. Within a month, wrote core pages with frontend and backend functionality that went into production, leading to increased product capabilities.
- Client outreach and management - when creating products for clients, ensured a minimum weekly communication to inform design decisions and goal orientation. Kept clients informed and involved throughout the product development process, from ideation to release.
- Drafted and wrote a security policy tuned for threats to a small data science company, ensuring regulatory compliance and trustworthiness.
- Took an untested frontend and wrote tests for dozens of components with Jest, working towards total automated testing coverage and improving production uptime to over 99%.
- Set up and fine-tuned app status monitoring using StatusCake for instant downtime notifications, lowering response time when something breaks and increasing overall team stability.
- When contracted by the Structured Finance Association to build a knowledge hub, wrote both frontend designs to their specifications and a full set of RESTful API endpoints to serve it.
- Wrote a CRUD interface translating existing database calls from MongoDB to SQLAlchemy, allowing the company to work with clients preferring a variety of databases and providing for easy data processing. Implemented caching to reduce average response time.
- Wrote scripts to vectorize a database table of 10,000+ records using a HuggingFace LLM to leverage MongoDB's semantic Vector Search ML tool.
- Ran production builds on PythonAnywhere's cloud environment and Heroku, supporting consistent product availability.

### Computer Science Instructor

Aug 2023 — Present

East Harlem Tutorial Program

*Harlem, NY*

- Without substantial prior experience leading full classes, instructed five sections of 17-26 students each. Designed and taught a class in a Harlem high school using online teaching materials adapted and personalized to a diverse student body.
- Taught Python to 100+ historically disadvantaged students across five sections for three semesters. Conveyed data structures, input/output, image manipulation, and some basic cryptography to students with a range of previous exposures; over 90% pass rate and several students continuing to college-level computer science after graduation.

### Incident Response Intern

June 2022 — August 2022

NYC Department of Education Security Incident Response Team

*New York, NY*

- Researched and responded to cybersecurity incidents on the Department of Education's citywide network of over 8 million hosts, including computer labs and personal machines assigned to students and teachers.

- Identified suspicious traffic using Devo SIEM, Microsoft Cloud App Security, and reverse IP lookup to flag accounts in need of remediation – typically up to 10 events daily – then remediated them by resetting credentials.
- Wrote scripts to automate filtering suspicious traffic using XSOAR, improving the throughput of the small six-person incident response team.

## CORE SKILLS

---

SOFT SKILLS: Verbal and written communication skills, client coordination, analytics and problem-solving, time management, teamwork, blogging, social media.

FRONTEND: JavaScript, HTML, CSS, React.js, Next.js, React Native, Docker, Heroku

BACKEND: Python, Flask, UNIX, Linux, Git, GitHub, C++, pytest, Jest

DATABASE: MongoDB, SQL, SQLAlchemy, SQLite, Postgres

MACHINE LEARNING: TensorFlow, scikit-learn, numpy, HuggingFace

MISCELLANEOUS: Microsoft Office (Excel, PPT, etc.), LibreOffice, Notion, Google Workspace

## PROJECTS

---

### LOTA

<https://www.libraryoftransalexander.org/>

- Wrote a custom website for a literature archival project, conferencing with client after every milestone
- Implemented monitoring with statuscake to ensure near-100% uptime

### Chomsky Abnormal Form
